

Limiting standard amateur radio AM (ampitude modulation) to 5.6 KHz will make it impossible to carefully restore both pre-1960 equipment and operate it. There are thousands of hams that do just that. Please don't end our restoral and operating possibilities. Hams that restore WWII and pre-WWII equipment are preserving your history and keeping alive the traditions of almost 100 years - all endorsed by the FCC and carefully utilized by these restorers and operators who did not purchase off-shore equipment which they can not repair. We AM hams also operate CW and SSB and digital modes, but to not be able to use AM equipment built and purchased in the USA for the last 60 plus years will destroy the backbone of ham radio and result in the loss of millions of dollars and countless hours spent restoring and the equipment that won WWII and placed us in the strongest position in the world as a cohesive body of expertise.

We restore equipment to exact "new" equipment specifications and return the equipment to its factory (new) cosmetic condition as either deployed in military service or purchased from a retail store USA-designed and constructed equipment. Thank you for reading this.
